Walk n' Wheel for a Cure

ABOUT LENNOX-GASTAUT SYNDROME

Lennox-Gastaut Syndrome (LGS) is a rare and often debilitating form of childhood-onset epilepsy. The syndrome is characterized by a triad of signs including multiple seizure types, moderate to severe cognitive impairment, and an abnormal EEG with slow spike-wave complexes. This triad of mixed seizures, abnormal EEG and intellectual impairment represents one of the most difficult forms of epilepsy to treat. LGS is also a physically dangerous epilepsy syndrome of childhood because of the frequent falls, injuries, and cognitive impairment that can severely limit quality of life.

LGS typically appears between the second and sixth year of life. This translates to a prevalence of approximately 12,500 children under the age of 18 in the United States and between 39,000 - 48,000 children and adults in the U.S.

The LGS Foundation is a non-profit organization dedicated to providing information about Lennox-Gastaut Syndrome while raising funds for research, services and support for individuals living with LGS and their families. Your participation will help not only to raise awareness but to pave the path toward finding better treatments and a cure for these children.

Programs Supported

- Scientific and Clinical Research
- International Family & Professional Conference
- Genetic Sequencing for Patients
- Patient Assistance Program
- Partnership with Give Kids the World
- Educational Materials
- And Much More
